SUMMARY

Google Certified Cybersecurity student pursuing a B.E. in Computer Science & Engineering with practical experience in ethical hacking, Security Information and Event Management (SIEM), network security, and incident response. Developed multiple cybersecurity tools including a SIEM Dashboard, PenTest Toolkit, and a Network Operations Center (NOC) monitoring platform. Contributed to institutionally deployed software solutions at Maharaja Institute of Technology, Mysore, receiving an official Appreciation Letter. Passionate about Security Operations Center (SOC), threat detection, penetration testing, and solving algorithmic problems through Data Structures & Algorithms.

TECHNICAL EXPERIENCE

Cybersecurity Self-Learning & Hands-on Labs

2025 - Present

- Completed practical labs on TryHackMe and Hack The Box covering network security, web exploitation, privilege escalation, reconnaissance, and incident response.
- Built Python-based security tools to automate log analysis, network monitoring, and penetration testing tasks.
- Practiced Linux administration, networking, and scripting to strengthen offensive and defensive security skills.
- Solved Data Structures & Algorithms problems regularly on GeeksforGeeks to improve analytical and problem-solving abilities.

PROJECTS

SIEM Dashboard

Python · Log Analysis · SIEM

Designed and developed a Security Information and Event Management dashboard to collect, correlate, and visualize security logs.

Implemented real-time event monitoring and alerting to detect suspicious activities.

Simulated Security Operations Center (SOC) workflows using log correlation and anomaly detection.

PenTest Toolkit

Python · Nmap · Automation

Developed an automated penetration testing toolkit for reconnaissance, service enumeration, and vulnerability assessment.

Automated network scanning and reporting using Python and Nmap.

Designed to simplify ethical hacking workflows in controlled environments.

Monitor_Situation - Network Operations Center

Go · Network Monitoring

Developed a real-time infrastructure and network monitoring platform.

Implemented service health monitoring and automated alert generation.

Improved infrastructure visibility using continuous monitoring principles.

ERP Management System

Web Application

Co-developed an Enterprise Resource Planning (ERP) system for institutional administration.

Automated academic and administrative workflows to improve operational efficiency.

Contributed to software adopted by Maharaja Institute of Technology, Mysore.

No Due Clearance Management System

Web Application

Developed a digital No Due Clearance system for multi-department approval workflows.

Reduced paperwork and improved administrative efficiency. Successfully deployed within the institution.

Hall Ticket Generation System

Web Application

Developed an automated hall ticket generation system integrated with institutional records.

Eliminated manual hall ticket preparation and improved accuracy. Successfully deployed for academic examinations.

EDUCATION

Bachelor of Engineering

Computer Science & Engineering

Maharaja Institute of Technology, Mysore
